

Agitators

Top mounted Tunetanken Agitators for tanks and containers, eg. Whey Tanks, are designed to mix liquids and keep them in a constant motion while inside the tank, thus preventing sedimentation and separation.

The agitator is mounted at the top of the tank on a mount flange and at the bottom on a console.

Agitator dimensions can be tailored specifically to your needs.

Axle seals and bushings are designed to withstand the demanding pressures and mechanical movements as well as provide a seal against permeation, thus preventing corrosion.

Comes with

- > Agitator incl. bottom console with collar bushings in nylon.
- > Motor incl. mounting flange and flex coupling.
- > Dimensions are tailored to your needs.

Design

- > Materials: stainless steel and nylon.
- > Propeller blade: stainless steel.
- > Variable shaft length.
- > Shaft: stainless steel.
- > Mounting flange.
- > Electric motor.
